REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. <i>(An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)</i>	F. TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	390	289	0	679
5. Cats	10	45	18	0	63
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	7	0	28	0	28
8. Rabbits	3	8	0	0	8
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	48	0	0	48
11. Pigs	0	35	257	0	292
12. Other Farm Animals	0	133	118	0	251
13. Other Animals	17	1286	59	0	1345

ASSURANCE STATEMENTS

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

ASSURANCE STATEMENTS	
1.)	Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
2.)	Each principal investigator has considered alternatives to painful procedures.
3.)	This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
4.)	The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

A.	B.	C.	D.	E.	F.
Animals Covered By The Animal Welfare Regulations	Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	81	23	0	104
5. Cats	0	100	27	0	127
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	10	0	0	10
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS	
1.)	Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
2.)	Each principal investigator has considered alternatives to painful procedures.
3.)	This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
4.)	The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL (Chief Executive Officer (C.E.O.) or Legally Responsible Institutional Official (I.O.)) I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

Column E Explanation

The justification for the animals listed in column E of the annual report is listed below.

1. Registration Number: 48-R-0003
2. Number of animals used in this study: 20
3. Species (common name) of animals used in this study: non-human primates
4. Explain the procedure producing pain and/or distress.

The potentially painful or distressful procedures involved in this study include disease progression, morphine withdrawal and desensitization to morphine.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

As stated in the IACUC-approved protocol, morphine has a profound effect on the immune system by its ability to prevent development of cell-mediated immunity (CMI) responses against intracellular pathogens. This effect has important implications for the pathogenesis of Human Immunodeficiency Virus (HIV) infection, especially NeuroAIDS. First, morphine modifies the receptor used by the virus to infect macrophages, and this potentially causes enhancement of infection in these cells. Because macrophages are the main cells in the brain that support replication of the virus, the effect of morphine would be to enhance the infection in the brain. Second, morphine-mediated suppression of production of IFN γ would abolish anti-HIV CMI responses, the major component of the immune system, responsible for controlling replication of the virus. Loss of CMI would therefore predict continuous and more robust replication of the virus in the brain. Third, cessation of morphine intake results in recovery of previously abolished CMI responses. Such an occurrence in the HIV-infected individual would result in reconstitution of the antiviral CMI response in brains that have large amounts of viral antigen, and this could precipitate severe encephalitis. The researcher uses the morphine-Simian Immunodeficiency Virus (SIV) model to explore these concepts.

All non-human primates in this protocol are infected with simian immunodeficiency virus (SIV). Additionally, a subgroup receives injections of morphine 3 times/day to produce well maintained morphine dependence, and another control subgroup receives saline injections. Use of analgesic and/or anxiolytic drugs as supplements to morphine, or in the subgroup of non-human primates not receiving morphine, would compromise the results. These analgesic and anxiolytic drugs are known to interact with the immune system (e.g. Mitrova & Mayer, 1976; Ferrarese et al., 1993; Ghosh & Chattopadhyay, 1993; Burdo et al, 2006; Cho 2007). Because the saline subgroup of monkeys serves as a

✓

4/5 R-002
1460

control for the morphine group, treating the saline subgroup with analgesic/anxiolytic drugs would compromise the interpretation of data.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 48-R-0109/35029
2. Number 40 of animals used in this study.
3. Species (common name) Guinea Pig of animals used in the study.
4. Explain the procedure producing pain and/or distress.

A standard 9CFR113.451 testing protocol:

Each of two guinea pigs with standard, or test sample shall be injected subcutaneously with a 3 ml dose of the Standard Toxin-Antitoxin, with standard or test sample. Injections shall be made in the same order that toxin is added to the dilutions of antitoxins. The test antitoxin shall be observed parallel with the titration of one or more dilutions of standard. Standard control animals shall be observed until they are down and are unable to rise or stand under their own power. At this time they are euthanized and the time of death is recorded. For a satisfactory test, the controls must reach this point with clinical signs of tetanus within 24 hours of each other and within 60 to 120 hours with clinical signs of tetanus. The clinical signs to be observed are increased muscle tonus, curvature of the spine, asymmetry of the body outline when the resting animal is viewed from above, generalized spastic paralysis, particularly of the extensor muscles, inability to rise from a smooth surface when the animal is placed on its side or any combination of these signs. If the control guinea pigs do not respond to the toxin, test antitoxin is not protective, whereas test animals living longer than control indicate the test antitoxin is at least 2AU/mL, and is satisfactory.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For federally mandated testing, see Item 6 below.)

Death as an End Point Scientific Rational Principle Investigator: (b) (6), (b) (7)(C)

Project Title or Course Number: Tetanus Toxin/Antitoxin Potency Testing

Species/Strain: Guinea Pig

A total of 40 Guinea Pigs were used during this reporting period.

Guinea Pigs are the laboratory animal that has been used and accepted by USDA-APHIS-CVB to test Tetanus vaccine efficacy.

Death as an end point is required by USDA-APHIS-CVB. In Guinea Pigs the interval between moribund, and death is fairly short for this disease. It is difficult to predict death without jeopardizing the end point result.

43 R 6109
5729

There are no analgesics available which will relieve pain and distress.

This study was conducted as partial fulfillment of the requirements to validate an in vitro test, which will replace the current guinea pig potency described in 9CFR113.114

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency: USDA-APHIS-CVB CFR 9CFR 113.451

**Annual Report of Research Facility
Column E Explanation**

1. Registration Number: 48-R-0111 (Xenometrics LLC)
2. Number of animals reported in Column E: One
3. Species (common name) of animals used in this study: Dog
4. Explain the procedure producing pain and/or distress.

The affected animal was included in a pharmacokinetic study in which pain and/or distress were not expected, however the contingency plan included provision for treatment and/or euthanasia if unexpected reactions resulted in pain and/or distress. The affected animal exhibited an adverse reaction to the dosing and died within a minute.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Not applicable, as pain or distress was not expected and the protocol included a contingency plan for the treatment and/or euthanasia of unexpected pain or distress.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102)

The study was conducted to support regulatory-required studies such as Nonclinical Safety Studies for the conduct of Human Clinical Trials for Pharmaceuticals (CDER, January 2010; Section 1.4. General Principles).

**Annual Report of Research Facility
Column E Explanation**

1. Registration Number: 48-R-0111 (Xenometrics LLC)
2. Number of animals reported in Column E: One
3. Species (common name) of animals used in this study: Dog
4. Explain the procedure producing pain and/or distress.

The affected animal was included in a toxicity study that required alleviation of pain or distress if it occurred. The animal exhibited a seizure, which resolved spontaneously but the animal was treated with diazepam to prevent further episodes. The animal appeared to recover and was monitored frequently, however the animal was found dead.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Not applicable, as the protocol included a contingency plan for the treatment and/or euthanasia of unexpected pain or distress.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102)

The study was conducted per Nonclinical Safety Studies for the conduct of Human Clinical Trials for Pharmaceuticals (CDER, January 2010; Section 1.4. General Principles).

**Annual Report of Research Facility
Column E Explanation**

1. Registration Number: 48-R-0111 (Xenometrics LLC)
2. Number of animals reported in Column E: One
3. Species (common name) of animals used in this study: Dog
4. Explain the procedure producing pain and/or distress.

The affected animal was included in a toxicity study that required alleviation of pain or distress if it occurred. The animal exhibited emesis and red feces which was treated medically. The animal appeared normal otherwise and exhibited no signs of pain or distress prior to being found dead the next day.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Not applicable, as the protocol included a contingency plan for the treatment and/or euthanasia of unexpected pain or distress.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102)

The study was conducted per Nonclinical Safety Studies for the conduct of Human Clinical Trials for Pharmaceuticals (CDER, January 2010; Section 1.4. General Principles)

University of Kansas Medical Center – Customer ID: 1460
IACUC Approved Exceptions

The justification for the animals listed in column E of the annual report is listed below.

1. Registration Number: 48-R-0003
2. Number of animals used in this study: 1
3. Species (common name) of animals used in this study: Rabbit
4. Explain the procedure producing pain and/or distress.

A biodegradable tracheal scaffold was surgically implanted in a rabbit on April 9, 2013. On April 24, the animal began to exhibit intermittent coughing. Following coughing episodes, breathing returned to normal and the animal was bright and alert and demonstrated good appetite. Two days later, the rabbit was noted to demonstrate occasional sneezing and mild rattling/wheezing. The animal was still bright with good appetite at this time. During the evening checks on April 27 the rabbit was noted by lab staff to have worsened respiratory sounds along with signs of discomfort and difficulty breathing. At this point the lab staff made a note but did not notify the veterinarian staff. The rabbit was found dead the next morning.

It is the opinion of the veterinarian staff that during the period from April 27 until its death the following day, the animal most likely experienced some unalleviated pain and distress, thus placing the animal in category E during that time. The incident and subsequent follow-up actions was reported to the USDA, OLAW and AAALAC on August 21, 2013.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

As described above, this was a single incident during the study and the complications of the experiment moved the animal from category D to E. Scientific justification for the alleviation of pain is not applicable in this situation.

6. What, if any federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):
